

SCREEN TUTORIAL

1) screen is an ancient screen edition program. Firstly one should obtain it from repo:

```
#sudo apt-get install screen
#screen -c .screenrc
##cp .screenrc $HOME
```

2) useful commands (few shortcuts):

```
start:
    #screen
welcome skip:
    space
new screen:
    Ctr+a c
active screens list:
    Ctr+a w
horizontal ( _ ) screen split:
    Ctr+a Shft+S
vertical ( | ) screen split:
    Ctr+a Shft+|
screen switching:
    Ctr+a Tab
with few screen switch to previous:
    Ctr+a Ctr+a
resize screen:
    Ctr+a :resize
obtain one from few screens:
    Ctr+a windowNo( 0 – 9 )
name currently active screen:
    Ctr+a Shft+A
start copy from one screen to another:
    Ctr+a [
end copying and secondly paste in somewhere else ( another screen ):
    Ctr+a ]
close active screen:
    Ctr+a k
close:
    Ctr+a \
help:
    Ctr+a ?
```

3) terminal listning is no line reversing (Shft+PgUp) – for log view one should save stream to file (in current directory) and open it in f.e. view:

```
#someLogCommand &>> logFile.txt
#view logFile.txt
```

4) there is quite useful internet explorer program w3m:

```
#sudo apt-get install w3m
mouse handling for w3m:
#sudo apt-get install gpm
internet stuff:
#w3m www.google.com
```
