

UNLOCK ENCRYPTED SSD

Some devices vendors provides BIOS configuration with conjunction of hard drive encryption. After any change in hardware device hangs. For reinstalling Operating System one must unlock SSD via erasing.

- 1) disconnect SSD from f.e. laptop,
- 2) configure f.e. PC in BIOS for SATA AHCI + HOTPLUG enable
- 3) connect SSD to PC
- 4) overwrite disk configuration (double check disk number):

```
#sudo mkdosfs -F32 -I /dev/sdx
```
